NVIDIA® IGX Thor™ ConnectX®-7, Payload

OVERVIEW

The VPX3U-THOR-CX7-PAY module meets the needs of demanding C5ISR applications, providing a secure compute node with advanced AI and HPC processing capabilities, high data transfer rates, and the cyber security features required to ensure data is being protected. This SOSA aligned module includes an NVIDIA® IGX THOR™, and an NVIDIA® ConnectX®-7 SmartNIC for high bandwidth applications.

Accelerated by the Blackwell GPU, with 128GB of ECC memory and delivering 2070 FP4 TFLOPS of AI compute makes this a superior platform for data processing, deep learning inference, machine vision, sensor fusion and robotics. The NVIDIA ConnectX-7 SmartNIC provides secure, high-speed network data transfer and a configurable PCIe switch. Support for RDMA over Converged Ethernet (RoCE) and NVIDIA GPUDirect, enables the fastest method to transfer data across a network to the GPU.

Unlocking the best performance requires the best cooling methods. WOLF's unique architecture and advanced cooling technology can efficiently move over 100W of heat to the chassis rails, better than any solid metal can perform. **Contact WOLF for any additional questions (ex. PCIe Gen 5, Safety, Security, Custom options, etc.)**
